

# HOW TO REPAINT CABINETS WITH ADVANCE®

Consider: Allowing paint to properly dry between steps makes this a multi-day job. Make sure you plan your schedule accordingly.

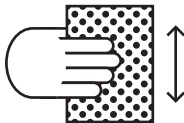

**1 Remove doors,** drawers and hardware. Removing hinges and pulls gives you the flattest surface to paint.

**2 Find a workspace** to paint your doors. You'll need to leave them in your workspace for extended periods to dry.

**3 Clean the surfaces.** Wipe doors down with a slightly damp cloth.

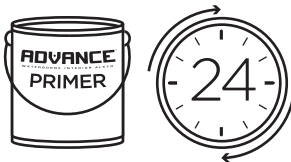

**4 Sand lightly.** Use a medium grit sandpaper (100- to 150-grit) to roughen up the surface.

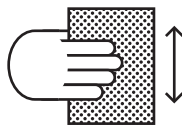

**5 Clean surfaces again.** Clean any dust off with a slightly damp cloth.

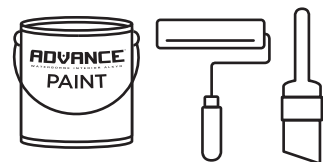

**6 Cover and tape.** Protect adjacent surfaces with tape or a drop cloth.

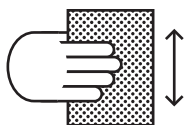

**7 Prime.** Apply Advance Primer and let it dry for 24 hours.

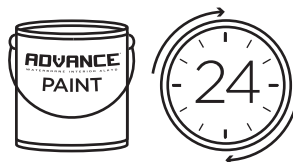

**8 Sand the primer.** Lightly sand with 220-grit sandpaper to smooth out drips or pools.

**9 Apply the first coat.** Cut in on uneven surfaces and corners with an angled brush. On flat surfaces, use a foam or microfiber roller. Let the paint dry completely.

**10 Sand again.** Once the paint is fully dry, sand with 220-grit sandpaper. When done, remove any dust with a slightly damp cloth.

**11 Apply second coat.** Again, apply Advance paint. Let the paint dry for 24 hours.
