

# RUST SCAT<sup>®</sup>

## WB ACRYLIC INT/EXT ENAMEL

### SEMI-GLOSS 90

#### Features

- Durable Multi-Purpose Waterborne Enamel
- Excellent Colour and Gloss Retention
- Semi-Gloss Acrylic Enamel
- Fast Dry
- Superior Levelling

#### Recommended For

A durable waterborne coating for use on wood, metal, masonry and drywall in commercial, institutional, industrial and residential applications. Not recommended for unprimed wood and metal, immersion service or high corrosion areas. Do not use as a house paint on wood siding.

#### General Description

Rust Scat<sup>®</sup> Semi-Gloss Acrylic Enamel is an interior-exterior finish, which is suitable for coating primed metal, wood or masonry surfaces. The thinned water and acrylic resin provides excellent colour and gloss retention as well as tenacious adhesion properties.

#### Limitations

- Rust Inhibitive when used with Rust Inhibitive Primer.
- Apply at temperatures between 10 °C to 32.2 °C (50 °F and 90 °F).
- Do not use as a house paint on wood siding.
- Not recommended for unprimed wood and metal, immersion service or high corrosion areas.

## Rust Scat® WB Acrylic Interior/Exterior Semi-Gloss Enamel Finish 90

### Surface Preparation

Surfaces to be painted must be clean, dry, and free of dirt, dust, grease, oil, soap, wax, scaling paint, water soluble materials and mildew. Remove any peeling or scaling paint, and sand these areas to feather edges smooth with adjacent surfaces. Glossy areas should be dulled. Drywall surfaces must be free of sanding dust. Spot prime before and after filling nail holes, cracks, and other surface imperfections.

New plaster or masonry surfaces must be allowed to cure (30 days) before applying base coat. Cured plaster should be hard, have a slight sheen and maximum pH of 10; soft, porous or powdery plaster indicates improper cure. Knife off any protrusions and prime plaster before and after applying patching compound. Poured or pre-cast concrete with a very smooth surface should be etched or abraded to promote adhesion, after removing all form release agents and curing compounds. Remove any powder or loose particles.

**Difficult Substrates:** Insl-x® offers a variety of specialty primers for use over difficult substrates such as plaster, bleeding woods, grease stains, crayon markings, hard glossy surfaces, galvanized metal or other substrates where paint adhesion or stain suppression is a particular problem. Your dealer can recommend the right problem-solving primer for your special needs.

**WARNING!** If you scrape, sand, or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by logging onto Health Canada @ <https://www.canada.ca/en/health-canada/services/environmental-workplace-health/environmental-contaminants/lead/lead-information-package-some-commonly-asked-questions-about-lead-human-health.html>

### Primer/Finish Systems

New surfaces should be fully primed, and previously painted surfaces may be primed or spot primed as necessary.

#### **Ferrous Metal (Steel & Iron):**

**Primer:** Acrylic Metal Primer (Rust Scat® 36 Primer) or Alkyd Metal Primer (Rust Scat® 35 Primer)

**Finish:** 1 or 2 coats of Rust Scat® WB Acrylic Enamel Semi-Gloss (90)

**Hard glossy alkyd surfaces:** Abrasion by sanding provides to optimum adhesion.

**Non-Ferrous Metal (Galvanized & Aluminum):** All new metal surfaces must be thoroughly cleaned with an Oil & Grease Emulsifier to remove contaminants. New shiny non-ferrous metal surfaces that will be subject to abrasion should be dulled with very fine sandpaper or a synthetic steel wool pad to promote adhesion.

**Primer:** Acrylic Metal Primer (Rust Scat® 36 Primer)

**Finish:** 1 or 2 coats of Rust Scat® WB Acrylic Enamel Semi-Gloss (90)

**Repaint, All Substrates:** Prime bare areas with the primer recommended for the substrate above.

### Application

Stir thoroughly with a circular, lifting motion to ensure even pigment dispersion. For best results, use quality applicator tools. Roller – Use a short nap enameling cover. Brush – Use a polyester or nylon filament brush. Spray – May be sprayed using conventional or airless equipment. It can be thinned with clean water, up to 15% for spraying. Apply only when surface and air temperatures are between 10 °C - 32.2 °C (50 °F and 90 °F).

Do not apply if temperature is within 5° of dew point or if rain is expected within 12 hours.

### Clean Up

Clean up with warm, soapy water followed by a clean water rinse.

### Environmental Health & Safety Information

**Use only in a well ventilated area.** Keep container closed when not in use. In case of spillage, absorb with inert material and dispose of in accordance with local regulations. Wash thoroughly after handling.

**KEEP OUT OF REACH OF CHILDREN  
PROTECT FROM FREEZING**

**Refer to Safety Data Sheet for  
additional health and safety information.**
