Over properly prepared interior wood surfaces apply a pre-seal coat of DuraLaq-WB® 1WB.100 waterborne in a 1-2 mil coat. Allow to dry and sand lightly with silicon carbide, 320 grit sandpaper. Apply second coat at 3-4 wet mils and sand. Topcoat with the desired sheen level selected from the 1WB.10X Series. Apply two coats, by spray only, at 3-4 mils each. Allow to dry fully and scuff sand between all coats. Do not exceed more than two topcoats (3 coats total). Keep from freezing. For best results, apply at room temperature above 68° F and maintain good air movement in drying area.

Specifications
Moisture content of wood should be no higher than 9%. Wood must be free of surface contaminants. Final sand wood no finer than 150-grit sandpaper, and remove all sanding dust. Mix thoroughly and apply by spray only. Check with equipment manufacturer for ideal settings to achieve proper atomization. Make sure equipment is designed for use with waterborne products. Follow all recommended maintenance procedures. Apply preseal coat at 1-2 wet mils, and allow to dry. De-nib with 320 grit, non-stearated, silicon carbide paper. Apply seal coat at 3-4 wet mils prior to applying final two coats. Variations of temperature and humidity may affect normal dry times. To promote adhesion, scuff sand between coats and remove sanding dust. Do not use steel wool. Use distilled water, in small amounts, if reduction is necessary. Read label and SDS for additional information and warnings.
