**WATERBORNE EPOXY SEMI-GLOSS**

**EGG-XXXX**

**Features**
- For Garage Floors, Basement Floors and Other Concrete Surfaces
- Resists Most Automobile Fluids
- Abrasion & Impact Resistant
- Soap & Water Clean-Up
- Easy to Clean
- Easy Application
- Fast Return to Service (refer to Page 2)

**Recommended For**

GarageGuard® Waterborne Epoxy is designed for use on basement floors, garage floors and other concrete surfaces. Ideal for use in food and beverage processing, transportation, warehouses, industrial refurbishment, healthcare, schools, large commercial structures, industrial and commercial flooring, and other areas where a performance refurbishment is needed.

**Certifications & Qualifications:**

All products supported by this data sheet contain a maximum of 250 grams per litre VOC / VOS (2.09 lbs/gal.) excluding water & exempt solvents. This product is compliant as an Industrial Maintenance Coating.

**General Description**

GarageGuard® Waterborne Epoxy is a water-based catalyzed epoxy which offers performance equal to traditional solvent based epoxy systems. It provides superior chemical, abrasion and impact resistance when compared to conventional waterborne epoxies. The highly cross-linked film provides years of service. Additionally, this product may be applied to most generic coating types without the fear of lifting or wrinkling. This is a two component product with a mix ratio of 3:1. It requires 3 parts of the proper “A”, or Base Component (under filled gallon can) mixed with 1 part of the proper “B” or Converter Component (quart). Mixing of Partial Kits Is Not Recommended.

**Limitations**

- Do not apply when air, surface or product temperature is below 10 °C (50 °F).
- Use the entire gallon of GarageGuard® within 4 hours of initial mixing.
- Mixing of Partial Kits Is Not Recommended.
- Not recommended for use in immersion service or acidic exposures.

Surface Preparation

Sweep all dirt and trash from the surface. Scrub floor with a stiff brush and strong detergent solution to remove all dirt, grease, oil and other contaminants. Scrub grease and oil spots with an Oil & Grease Emulsifier. Scrub the floor a section at a time (3 m x 3 m) (10’ by 10’) and thoroughly rinse each section before moving on. Once the entire floor is clean, rinse the floor thoroughly with clean water and allow to dry completely. Use a squeegee, if necessary, to remove ponded water.

Previously Painted Floor: Loose or damaged concrete and cracks must be filled with a suitable concrete based patching material. Remove all loose materials and dust. Remove loose or peeling paint by sanding and scraping. Feather the edges to attain a smooth look to the finish coat. Test the remaining paint for adhesion. Cut an X in the paint with a single edge razor blade. Apply duct tape firmly to the floor directly over the X. Remove the duct tape with one quick pull. If more than 25% of the paint at the X is removed, do not apply GarageGuard® until all existing paint is removed. Do not use muriatic acid or other etching materials on a painted floor.

Floor Never Painted: Allow new concrete to cure for a minimum of 30 days. Loose or damaged concrete and cracks must be filled with a suitable concrete based patching material. Be sure to smooth the patch completely. Allow to dry in accordance with the manufacturer’s instructions. Remove all loose materials and dust. All bare concrete floors need to be acid etched with a concrete etching solution or a 10% muriatic acid solution to open and roughen the surface enough to assure good adhesion and to neutralize the alkali salts. Follow the manufacturer’s instructions and safety precautions. Be sure to protect your eyes (goggles) and skin (rubber gloves and boots) while preparing and using any acid solution. Neutralize the acid according to instructions on the etching solution package or mix 3.79 L/1 lb. of baking soda in 18.9 L/5 gallons of clean water and distribute over the floor. Thoroughly rinse the floor with clean water and allow to dry thoroughly (at least 24 hours). Check for dryness using a moisture meter specific to masonry surfaces (2% moisture content or less) or ASTM D-4553 Plastic Sheet Test. Tape down a clear piece of plastic to the concrete floor for 24-48 hours; if moisture collects or slab has darkened the moisture/vapour transmission is too high to accept a coating and will need additional drying time. The floor should have a roughened feel of about 80 grit sandpaper. Please consult Technical Service for other surface preparations or for use in severe environments.

Special Notes: All glossy surfaces can be slippery. Where non skid properties are required, a non-skid additive should be used. All epoxy coatings will chalk and fade if applied on exterior surfaces subjected to direct sunlight. Under certain environmental conditions, epoxy coatings will yellow. They can also stain with prolonged exposure to brake fluid. This staining will not affect the durability or protective qualities of the coating. GarageGuard® will not cure at surface temperatures below 10 °C (50 °F). Not recommended for use in immersion service or acidic exposures.

WARNING! If you scrape, sand, or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by logging onto Health Canada @ https://www.canada.ca/en/health-canada/services/environmental-workplace-health/environmental-contaminants/lead/lead-information-package-some-commonly-asked-questions-about-lead-human-health.html

Application

Mix each individual component thoroughly prior to inter-mixing the two. “A” and “B” must be combined together (3:1 ratio) and thoroughly mixed. The use of a drill mixer at low speed is required to accomplish this task. Then allow the mixture to induct for a period of 30 minutes. This induction time is critical and should be the same for all kits. Do not mix partial containers. Do not mix more material than can be used in 4-6 hours. Thin with water ONLY. Do not exceed 10% reduction.

Airless Spray: Tip range .015 – .019. Total fluid output pressure at tip should not be less than 2100 psi.

Air Spray (Pressure Pot): DeVilbis MBC or JGA gun, with 704 or 765 air cap and Fluid Tip E.

NOTE: Do not allow material to remain in hoses, gun or spray equipment. Thoroughly flush all equipment with recommended thinner.

Brush: Synthetic

Roller: 6.35 mm – 12.7 mm (1/4” – ½”) nap Synthetic roller cover. Keep roller wet and roll in one direction.

NOTE: If more than 48 hours (@ 25 °C (77 °F) elapses between coats, sand the film to provide sufficient profile. Recommended application temperatures are between 10 °C (50 °F) and 32.2 °C (90 °F). Do not paint if surface temperature is within 5 degrees of the dew point or if rain is expected within 12 hours.

Return to Service:

Light foot traffic – 24 hours

Heavy foot traffic – 48 hours

Cool tires – 72 hours

Hot Tires – 5 to 7 days

Clean Up

Clean brushes, rollers and other equipment with soap and water immediately after use.

Environmental Health & Safety Information

CAUTION

IRRITANT

MAY IRRITATE EYES. MAY IRRITATE SKIN.

Do not swallow

Do not get in eyes.

Do not get on skin or clothing.

Do not breathe fumes.

Contains ingredients which may cause blood damage based on animal data.

Handle with care.

Wear rubber gloves and safety glasses.

FIRST AID TREATMENT

Contains: Aliphatic polyamine, Glycol ethers

If swallowed, call a Poison Control Centre or doctor immediately.

Do not induce vomiting.

If in eyes, rinse with water for 15 minutes.

If on skin, rinse well with water.

Keep container closed when not in use. In case of spillage, absorb with inert material and dispose of in accordance with local regulations. Wash thoroughly after handling.

IMPORTANT! The contents of this package must be blended with the resin component before the product can be used. Any mixture of components will have hazards of both components. Before opening the package, read all instructions and safety precautions. Be sure to protect your eyes (goggles) and skin (rubber gloves and boots) while preparing and using any acid solution. Neutralize the acid according to instructions on the etching solution package. If you scrape, sand, or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear NIOSH approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by logging onto Health Canada @ https://www.canada.ca/en/health-canada/services/environmental-workplace-health/environmental-contaminants/lead/lead-information-package-some-commonly-asked-questions-about-lead-human-health.html.

Caution:

All floor coatings may become slippery when wet. Where non-skid characteristics are desired, a small amount of clean sand may be added. Stir often during application.

KEEP OUT OF REACH OF CHILDREN

PROTECT FROM FREEZING

FOR PROFESSIONAL USE ONLY

Refer to Safety Data Sheet for additional health and safety information.
